1. IPMICFG Overview

IPMICFG is a utility for IPMI devices configuration. It is a command line tool providing IPMI commands and Supermicro proprietary OEM commands.

It is designed for easy to use and no pre-installation required. Use it for basic IPMI configuration and BMC status reading and monitoring.

1.1 Features

- Set up IPMI IP Address
- Set up IPMI Configuration
- Configure IPMI User Management
- Configure IPMI FRU
- Manage System Event Log (SEL)
- Manage IPMI by node management (NM) protocol

1.2 Operation Requirements

To run basic operations, you must meet the following requirements:

System Requirements:

Environment	Requirements
Hardware	Free Disk Space: 200 MB
	Available RAM: 64 MB
	Baseboard Management Controller (BMC) must support Intelligent Platform Management Interface (IPMI) version 2.0 specifications.
Operating System	<ul style="list-style-type: none"> - DOS 6.22 - Microsoft Windows 7/ Server 2003 32bit and 64bit /Server 2008 32bit and 64bit - RHEL 5.x or 6.x,/CentOS 5.x or 6.x(x86/x86_64)

The software you should get in advance:

Program/Script	Description
----------------	-------------

\DOS\IPMICFG.exe	IPMICFG DOS (DOS6.22)
\linux\32bit\ipmicfg-linux.x86	IPMICFG linux 32bit
\linux\32bit\ipmicfg-linux.x86.static	IPMICFG linux 32bit which static link Lib
\linux\64bit\ipmicfg-linux.x86_64	IPMICFG linux 64bit version
\linux\64bit\ipmicfg-linux.x86_64.static	IPMICFG linux 64bit which static link Lib
\win\32bit\ipmicfg-win.exe	IPMICFG Windows 32bit
\win\64bit\ipmicfg-win.exe	IPMICFG Windows 64bit
*.dat files	database for MB type and SEL event table

Additional driver installation:

Linux:

IPMICFG Linux version will automatically use linux built-in ipmi driver from ipmitool to access BMC. If there is no ipmi driver loaded, IPMICFG will use its internal API to access BMC.

However, the performance will be slow.

Here is a step to load ipmi driver.

You should be type these command to activate openIPMI driver:

1. # modprobe ipmi_msghandler
2. # modprobe ipmi_devintf
3. # modprobe ipmi_si

1.3 Typographical conventions

This manual uses the following typographical conventions.

`Courier-New font size 10` represents command line instructions (CLI) in Linux terminal mode.

Bold is used for the keyword needed to pay attention.

Italic is used for variable and section name.

enclose the parameters in syntax description.

`[shell]#` represents the prompt for input in Linux terminal mode.

| A vertical bar separates items in a list.

2. Installation and Setup

Example 6:

```
[ipmicfg_HOME] > IPMICFG.exe -garp on
```

Failed to enable Gratuitous ARP, Completion Code=80h

Gratuitous ARP means Gratuitous ARP request and Gratuitous ARP reply. It is to update ARP table for MAC Address and IP Address mapping. But it is not supported by default for most network devices because there is security concern. If customer needs this function, please make sure the network devices to enable Gratuitous ARP function.
